### Summary Statistics:

Total Cases: 17,224

Total Deaths: 767

Total Recoveries: 1,375

### Cases by Sex:

Male: 9,470

Female: 7,754

### Quarantine Status:

Quarantined: 3,680

Not Quarantined: 1,924

### Health Status Distribution:

Mild: 11,713

Recovered: 3,808

Died: 950

Asymptomatic: 680

Severe: 55

Critical: 18

The COVID-19 pandemic has been a defining global health crisis of our time, with profound impacts on public health, economies, and daily lives. In the Philippines, the spread of COVID-19 has prompted rigorous data collection and analysis to guide policy decisions and healthcare responses. This storyboard leverages the "DOH COVID Data Drop Case Information" dataset to provide a comprehensive overview of the pandemic's progression in the country.

**Conclusions:**

The majority of COVID-19 cases are mild, but there are significant numbers of severe and critical cases that stress healthcare resources. This certain age groups and regions are disproportionately affected, requiring targeted responses. also, the trends over time show fluctuations in case numbers, suggesting varying levels of control and response effectiveness.

**Recommendations:**

1. Enhance healthcare capacity in regions identified as hotspots to better manage severe and critical cases.
2. Implement targeted public health interventions for demographics that are most at risk.
3. Continue monitoring trends to adapt and respond quickly to changes in the pandemic's progression.
4. Encourage ongoing public adherence to health guidelines to reduce transmission rates.
